

Good Coding Tips

Peter Savage

February 2012

Tip 1 - First things first

(or Why didn't you tell me that in the first place)

Consider the following conversation;

Alvin: I've got an issue with my computer.

Bryan: What seems to be wrong?

Alvin: It doesn't print when I ask it to.

Bryan: Have you tried turning the printer off and on again?

Alvin: Yes.

Bryan: Have you reinstalled the print drivers?

Alvin: Yes.

Bryan: Can you hook it up to another computer and try it?

Alvin: No, I've run out of ink.

It's down right infuriating isn't it, when

```
import re
import sys

a = [3,4,5,6,7]

for i in a:
    print "hi" + str(a)
```

Remember

You don't get nothing for free

There is always some compromise
